

1 23. (Amended) A picture transmission system
2 comprising a digital camera and a picture transmission unit said digital
3 camera comprising:
4 an addressable memory which is separatable from said camera;
5 a picture capturing unit for capturing picture information
6 corresponding to an image and for storing said picture information in said
7 memory; and
8 a control information processor for storing in said memory a
9 processing method for indicating how said picture information is to be
10 processed, said processing method selected after said picture information is
11 captured, said processing method remaining in said memory after said
12 memory is separated from said camera
13 and said picture transmission unit comprising:
14 processing means for performing transmission according to
15 picture information stored in said memory;
16 processing control information obtaining means for obtaining
17 transmission control information relating to said picture to be transmitted
18 from said memory; and
19 processing control means for instructing said processing means
20 to transmit said picture.
